

Paul Stenet (aka PaulyBearCoding)

Full-Stack Developer | Real-Time Systems | Cross-Platform Architect

Email: paul@yourdomain.com | GitHub: github.com/PaulyBearCoding

Summary

Versatile full-stack engineer with 15+ years of real-world systems and engineering experience, pivoted to software in 2025 to build scalable digital platforms. Specialized in streaming monetization platforms, secure real-time communication, and mobile-first UX across web and Flutter.

Technical Skills

- Languages: JavaScript, TypeScript, Dart, HTML/CSS
- Frontend: React, Next.js, Flutter, TailwindCSS
- Backend: Node.js, Express.js, MongoDB, Mongoose
- Real-time: WebRTC, Socket.IO, TURN/STUN, FFmpeg, libsignal (planned)
- DevOps: Docker, NGINX, GitHub CI/CD
- Security: JWT, bcrypt, Helmet.js, CSRF protection, input validation
- Testing: Cypress, Flutter integration_test
- Tools: Postman, Git, Figma, Adminer

Projects

- **Gjyl**: Social platform with real-time video/audio calling, chat, group communication, token-based creator economy, and Flutter mobile experience. Features scalable microservices, secure authentication, and a modern responsive UI.
- **Streaming Monetization Platform**: Built a full-featured streaming platform from the ground up. Integrated live tipping, gifting, creator dashboards, admin surveillance panels, FFmpeg video handling, and secure login infrastructure.
- **Legal Monitor Dashboard**: Admin backend with encrypted logs, IP heatmaps, DMCA alerting, brand protection filters, and CSV evidence export.
- **Mobile & Web UI Systems**: Flutter-powered mobile interfaces with video playback, gesture controls, and offline caching. Web UI includes feed systems, profile layouts, and comment structures.

Professional Experience

Previously led engineering and operations in physical systems and facility infrastructure. Transitioned into software development in 2025 with a focus on platform architecture, automation, and scalable backend design. Over 15 years solving real-world systems problems before building public digital systems.

Education & Learning

- Self-taught full-stack developer with professional infrastructure background
- Continuous learning in software frameworks, UI/UX, system design
- Certified in operations safety, leadership, and digital platform architecture
